

**IN THE CLAIMS:**

Please cancel claims 1-39 without prejudice.

Please add the following new claims:

40. (New) A collapsible structure adapted to be supported on a surface and comprising:

at least three foldable frame members, each having a folded and an unfolded orientation;

a fabric material covering each frame member to form a side panel for each frame member when the frame member is in the unfolded orientation;

each side panel further including a left side and a right side, with the left side of each side panel coupled to the right side of an adjacent side panel, and the right side of each side panel coupled to the left side of another adjacent side panel; and

an add-on panel coupled to the fabric material of a first of the side panels, the add-on panel having a foldable frame member having a folded and an unfolded orientation, and a fabric material covering the frame member for the add-on panel.

41. (New) The structure of claim 40, wherein the left side and right side of each side panel is vertical.

42. (New) The structure of claim 40, wherein the add-on panel is a first add-on panel, further including a second add-on panel coupled to a second of the side panels, the second add-on panel having a foldable frame member having a folded and an unfolded orientation, and a fabric material covering the frame member for the second add-on panel.

43. (New) The structure of claim 40, wherein the add-on panel is a first add-on panel, further including a second add-on panel coupled to the first side panel, the second add-on panel having a foldable frame member having a folded and an unfolded orientation, and a fabric material covering the frame member for the second add-on panel.

44. (New) The structure of claim 43, further including a third add-on panel coupled to a second of the side panels, the third add-on panel having a foldable frame member having a folded and an unfolded orientation, and a fabric material covering the frame member for the third add-on panel.

45. (New) The structure of claim 40, wherein the frame member of the add-on panel is twisted and folded to form a plurality of concentric loops when in the folded orientation.

46. (New) The structure of claim 40, wherein each side panel has a bottom side which rests on the surface to support the structure.

47. (New) A collapsible structure adapted to be supported on a surface and comprising:

a first side panel, a second side panel, a third side panel, and a fourth side panel, each side panel having:

at least three foldable frame members, each having a folded and an unfolded orientation;

a fabric material covering each frame member to form a side panel for each frame member when the frame member is in the unfolded orientation;

each side panel further including a top side, a left side and a right side, with the left side of each side panel coupled to the right side of an adjacent side panel, and the right side of each side panel coupled to the left side of another adjacent side panel;

wherein the top side of the first side panel is at a lower vertical height than the top side of the second panel side; and

an add-on panel coupled to the top side of the first side panel, the add-on panel having a foldable frame member having a folded and an unfolded orientation, and a fabric material covering the frame member for the add-on panel.

48. (New) The structure of claim 47, wherein the left side and right side of each side panel is vertical.

49. (New) The structure of claim 47, wherein the add-on panel is a first add-on panel, further including a second add-on panel coupled to the second side panels, the second add-on panel having a foldable frame member having a folded and an unfolded orientation, and a fabric material covering the frame member for the second add-on panel.

50. (New) The structure of claim 47, wherein the add-on panel is a first add-on panel, further including a second add-on panel coupled to the first side panel, the second add-on panel having a foldable frame member having a folded and an unfolded orientation, and a fabric material covering the frame member for the second add-on panel.

51. (New) The structure of claim 50, further including a third add-on panel coupled to the first side panel, the third add-on panel having a foldable frame member having a folded and an unfolded orientation, and a fabric material covering the frame member for the third add-on panel.

52. (New) The structure of claim 47, wherein the frame member of the add-on panel is twisted and folded to form a plurality of concentric loops when in the folded orientation.

53. (New) The structure of claim 47, wherein each side panel has a bottom side which rests on the surface to support the structure.
